

Mahlatse Mokgawa - The Play Book

“From Learner → Builder “

SECTION 1: CORE IDENTITY SYSTEM

Who I am becoming at T3

Role Positioning

You are no longer just learning skills. You are now a:

-  Web Developer (Front-End Focus)
-  Systems Builder (Automation + Workflow thinker)
-  Problem Solver (Real-world task execution)
-  Meta-Skill Operator (Learning how to learn faster than average)

Core Skill Stack

Web Development

- HTML (semantic structure mastery)
- CSS (layout, responsiveness, UI polish)
- JavaScript (DOM manipulation, logic, interactivity)
- Git + GitHub (version control + collaboration)

Meta-Skills

- Task breakdown thinking
- Debugging mindset
- Project structuring
- Self-learning loops

Productivity Systems

- Daily build cycles
- Sprint execution (20–60 min focused builds)
- Portfolio-first learning

SECTION 2: BUILDING BLOCK SYSTEM (MAIN FOCUS)

Core Principle:

“Every skill must produce a visible project output.”

MODULE 1: HTML FOUNDATION PROJECTS

Tasks:

- Build a personal landing page
- Create a structured CV page
- Build a product/service page

Must Include:

- Header / Hero section
- About section
- Skills section
- Contact section

MODULE 2: CSS MASTERY SYSTEM

Tasks:

- Convert plain HTML pages into styled UI
- Build responsive layouts (mobile-first)
- Create 3 UI themes:
 - Minimalist (clean white/gray)
 - Dark mode interface
 - “Sky blue + cloud aesthetic” UI (your preference)

Must Include:

- Flexbox layouts
- Grid systems
- Hover effects
- Responsive breakpoints

MODULE 3: JAVASCRIPT INTERACTIVITY

Tasks:

- To-do list app (advanced version)
- Simple calculator
- Interactive form validation system

Must Include:

- DOM manipulation
- Event listeners
- Condition logic
- Local storage (for at least one project)

MODULE 4: REAL-WORLD PROJECT SYSTEM

Flagship Project (LEVEL 3 CORE):

“Personal Developer Portfolio System”

Must include:

- Hero section (your identity)
- Projects section (3–5 real builds)
- Skills dashboard
- Contact system
- GitHub integration links

SECTION 3: PORTFOLIO ENGINE

Objective:

Turn everything into **hireable proof**

Portfolio Requirements:

Each project must include:

- Project Name
- Problem it solves
- Tools used (HTML/CSS/JS)
- Live demo (Netlify or GitHub Pages)
- GitHub repo link

Portfolio Rule:

“If it’s not deployed, it doesn’t exist.”

SECTION 4: DAILY SPRINT SYSTEM

Daily Structure (Minimum Viable Growth Loop)

1. Warm-up (5–10 min)

- Review last code
- Fix small bugs

2. Build Sprint (20–60 min)

- Work on ONE feature only
- No multitasking

3. Debug Phase (10–20 min)

- Break things intentionally
- Fix errors manually

4. Output Rule

- Every session must produce:
 - Code commit OR
 - UI improvement OR
 - New feature

SECTION 5: GIT & VERSION CONTROL SYSTEM

Must-Have Skills:

- `git init`
- `git add .`
- `git commit -m ""`
- `git push origin main`
- resolving merge conflicts

Git Rule:

“Every change must be traceable.”

SECTION 6: LEVEL 3 SUCCESS METRICS

I will consider myself Level 3 ready when:

✓ Technical Proof

- 3+ deployed web projects
- 1 full portfolio website
- GitHub updated consistently

✓ Skill Proof

- Can build UI without tutorial copying
- Can debug own errors
- Can structure a project from scratch

✓ System Proof

- Uses daily sprint workflow
- Uses GitHub properly
- Thinks in components (not random code)

SECTION 7: MINDSET UPGRADE

Core Rules:

- Build > Watch
- Fix > Restart
- Ship > Perfect
- Repeat > Overthink

Anti-Level 3 Behaviors:

- Copy-paste coding without understanding
- Starting projects without finishing
- Jumping between tutorials
- No Git commits

FINAL OUTCOME OF LEVEL 3

At the end of Term 3, you will have:

- A developer portfolio
- Real deployed projects
- GitHub activity history
- Ability to apply for junior dev / internship roles
- Strong base for Level 4 (Frameworks + Backend)
